In Home boundary breach alert for owner, Easy installation, with no wires to bury Contain up to two dogs, with customizable correction levels for each dog Kindly refer the user manual given below and the video for troubleshooting steps as the unit has its limitations. How Does It Work? The Radial-Shape Wireless Dog Fence by Havahart Wireless has been enhanced to better meet consumers' needs. The Radial-Shape Select Wireless Fence gives dog owners a tighter Trigger Zone (generally less than 3 to 6 feet) to keep dogs safe. This is done through enhanced data filtering, resulting in better communication between the Controller and Collar. Simply set the Fence Boundary distance on the Controller, from 40 to 400 feet and add the Collar to the System. The Radial-Shape Select Wireless Dog Fence communicates continually with your dog's Wireless Collar, enabling the System to track the location of up to two dogs within the Roaming Area. The Collar will issue a mild static correction (Tone-only or Static, based on the settings you choose), when your dog reaches the Trigger Zone.
