Safe and Effective Tangle Free Pet Tether Full 360 Degree Dual-Swivel Motion Secure Anchoring System Durable Construction Great for Camping Safe and Effective Tangle Free Pet Tie-Out Full 360 Degree Dual-Swivel Motion Securely holds 1000 lbs. of pull force Durable Construction Great for Camping Product Description "SUREswivel was designed for those times when tethering your pet is the safest or the only option. It is a revolutionary 360-degree swiveling tie-out for tethering your pets that is truly tangle free. When you use the SUREswivel your tether will not wrap up on the base or twist up and break. It has been tested in stable ground to securely hold 1000 lbs. of pull force when installed with the six included X3 Spiraled Anchor Stakes. X3 Anchor Stakes have a patented spiraled shaft design that provide three times the holding strength of a standard stake and firmly hold the base in place when used in stable soil. The SUREswivel base is actually screwed to the ground and is easy to install and remove. SUREswivel is suitable for use with pets large or small. It is great for portable applications like camping, RVing, or use in the front yard. It is important when installing the SUREswivel to factor in soil stability and consistency, as well as the size and activity level of your pet, as these all play a factor in how securely the base holds in the ground. Here are some suggestions on how to help ensure the best hold possible: • Remove the grass at the install site down to the dirt in order to help the base seat in tighter • Make sure to pound the stakes all the way down, so the bottom of the stake head is tight against the base • Prior to each use, when attaching the tether to the base, do a quick check to make sure that the stakes are still tight against the base • SUREswivel can also be permanently installed in the ground, a deck, or in the back of a truck (using bolts or lags, not included). This product is proudly manufactured in the USA. Tethered pets should not be left unattended. Manufacturer warranties product against breakage. Please visit their website for more information. "
